 Mode of Operation: Charging mode  
 Tested Voltage: Computer: 117Va.c., 60Hz

**Test Method:**

Conducted emissions measurements are investigated and also taken pursuant to the procedures of ANSI C63.4 – 2009. The EUT was setup as described in the procedures, and both lines were measured.

Initial measurements were performed in peak and average detection modes on the live and neutral line, any emissions recorded within 30dB of the relevant limit lines were re-measured using quasi-peak and average detection on the live and neutral lines with the worst case recorded in the table of results.

**Radiated Emissions (30MHz to 18GHz)**

Test Requirement: FCC Part 15 Section 15.109  
 Test Method: ANSI C63.4  
 Test Date(s): 2016-01-15  
 Temperature: 25.0 °C  
 Humidity: 51.0 %  
 Mode of Operation: Band II 1900MHz link mode  
 Tested Voltage: 3.7Vd.c. ("Rechargeable battery" x 1)

**Test Method:**

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2009.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, For battery operated equipment, the equipment tests shall be perform using new battery. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.
